EPOXY
URETHANE
AND
POLYASPARTIC
PRODUCTS

# ☞ CrownQuartz, CrownFlakes, CrownChips, & CrownHybrid

Recommended Use: *For concrete, wood, or steel floors, such as those found in showrooms, garages, restaurants and hospitals where a beautiful, durable, seamless surfaces are desirable. Ideal for applications where a one-of-a-kind design is desirable.*

System Description: *The uniqueness of each polymer overlay is the size and shape of the vinyl/acrylic flakes within each system. They are available in multiple mixtures, each with a distinct look designed to create a special mood within any environment. Standard and custom solid colors and blends are available. Flakes are encapsulated in an epoxy base coat for superior adhesion. The system is then top-coated with an epoxy, polyurea, polyaspartic, or polyurethane system. Durable safety walking surfaces exceed OSHA and ADA slip resistance requirements.*
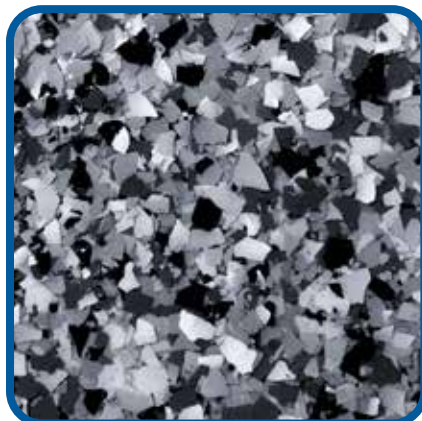

## DELIVERING RESULTS, RELIABILITY & ROCK SOLID DEPENDABILITY.

CrownQuartz

CrownFlakes

CrownChips

CrownHybrid

☞ CrownBinder™
Product 7300

Recommended Use: *Ideal for light to heavy duty commercial or industrial concrete surfaces requiring a primer.*

System Description: *CrownPrime is a 100% solids epoxy system designed to provide optimum adhesion to concrete. It has been well received by both garage and industrial floor coating installers as the primer to use. CrownPrime develops a strong bond to both the concrete and various broadcast mediums and topcoats. CrownPrime can also be used as a stand-alone sealer.*

☞ CrownShield™ 50
Product 320

Recommended Use: *Used in decorative, commercial, and institutional applications, and in the toughest heavy-duty industrial and manufacturing applications.*

System Description: *CrownShield 50 is a 100% solids industrial floor epoxy used in floor coatings for applications that call for high strength, gloss, abrasion and chemical resistance. The low odor of the system allows it to be applied indoors and wherever application odors are a concern. Due to its low viscosity, CrownShield 50 can be applied via roller, brush, or squeegee.*

☞ CrownClear™
Product 326

Recommended Use: *Used in decorative, commercial, and institutional applications, and in the toughest heavy-duty industrial and manufacturing applications that require some UV stable.*

System Description: *CrownClear is a 100% solids industrial floor epoxy used in floor coatings for applications that call for high strength, gloss, UV stable, abrasion and chemical resistance. The low odor of the system allows it to be applied indoors and wherever application odors are a concern. Due to its low viscosity, CrownClear can be applied via roller, brush, or squeegee.*

☞ CrownPro™ 10
Product 334

Recommended Use: *Used in decorative, commercial, and institutional applications, and in the toughest heavy-duty industrial and manufacturing applications that require the best in UV Resistance.*

System Description: *CrownPro 10 is a 100% solids polyurea topcoat designed for use over concrete garage floor coatings and a wide range of other concrete floor coatings and stains. CrownPro 10 is easy to apply, zero VOC, low viscosity, clear or pigmented with nearly no odor during application. Best for interior or exterior use where UV stability is required.*

☞ CrownPro™ 7072SC

Recommended Use: *Used in decorative, commercial, and institutional applications, and in the toughest heavy-duty industrial and manufacturing applications that require the best in UV Resistance.*

System Description: *CrownPro 7072SC is a high solids polyaspartic topcoat designed for use over concrete garage floor coatings and a wide range of other concrete floor coatings and stains. CrownPro 7072SC is easy to apply, low viscosity, clear or pigmented, and best for interior or exterior use where UV resistance is required. CrownPro 7072SC is the ideal system to use if quick walk-on time is required on the job.*
